DocFinder

DEPI-SoftwareDevelopment / React Frontend Web Developer

Team Leader: Moazz Ahmed Rabea
Team Members: Eman Ahmed Mohamed , Mariam Atef Mahfouz , Shayma Mohamed Youssef , Aballah Omar Mohamed

1. Project Planning & Management

Project Proposal

Overview: DocFinder is a responsive website for finding doctors by specialty and location, viewing doctor profiles, and booking appointments. Doctors manage their schedules and daily appointments; the administrator manages clinics and verifies doctor registrations.

Objectives:

- Help patients find doctors and clinics.
- Allow patients to book, view, reschedule, and cancel appointments.
- Show a queue number and estimated waiting time.
- Let doctors manage schedules at associated clinics.
- Verify doctor documents before publishing their profiles.

Scope: Patient accounts, doctor registration and approval, doctor search and profiles, clinic and schedule management, appointment management, post-visit reviews, and administrator controls.

Project Plan - Timeline, Gantt Chart, Milestones, Deliverables, and Resources

Deliverable / Milestone	Deadline	Gantt: Oct	Nov	Dec
Project Planning & Management	Oct 19, 2026 (reported extension)	•		
Literature Review	Oct 19, 2026 (reported extension)	•		
Requirements Gathering	Oct 19, 2026 (reported extension)	•		
System Analysis & Design	Nov 6, 2026; internal target Nov 2	•	•	
Implementation	Nov 30, 2026; internal target Nov 26		•	•
Testing, Final Presentation & Reports	Dec 4, 2026; internal target Nov 30		•	•

Resources: Four team members, approximately 10 hours per member per week (40 team-hours per week), VS Code, Git/ GitHub,Figma,andthe coursetechnologies.

Task Assignment & Roles

Team Member	Responsibility
Moazz - Team Leader	Coordinate tasks, deadlines, and project integration.
Eman	Patient pages: search, doctor profiles, and booking.
Shaimaa	Doctor pages: schedules, availability, and daily appointments.
Mariam	Admin pages: clinic management and doctor approvals.
All members	Testing, code review, documentation, and presentation.

Risk Assessment & Mitigation Plan

Risk	Mitigation
Time shortage	Prioritize required features and review progress weekly.
Double booking	Validate availability before confirming each booking.
Unauthorized data access	Use secure authentication and role-based permissions.
Unverified doctor information	Require administrator review before profile publication.
Lostwork or integrationconflicts	Use Git, frequent commits, and backups.

KPIs (Key Performance Indicators)

KPI	Measurement / Target
Response time	Measure response time of key pages/actions; proposed test target: under 2 seconds.
System uptime	Available time ÷ monitored time; proposed target: 99% during monitored testing.
User adoption rate	Track registered users and completed bookings over a defined period; set a numeric target after initial testing.

2. Literature Review

Feedback & Evaluation

- Theteam reports thatthe project idea was discussed with the supervisor and approved.
- Detailed lecturer feedback and an official evaluation score have not been provided.

Suggested Improvements

- Improve doctor search and filtering.
- Make booking steps clear and easy to use on mobile devices.
- Improve waiting-time estimates after testing.
- Consider appointment reminders as a future improvement.

Final Grading Criteria

The official grading weights were not provided. Use the DEPI rubric if supplied. The required assessment areas are

Documentation: planning, requirements, design, and reports.

Implementation: working features and organized code.

Testing: test cases, results, and fixes.

Presentation: explain the problem, demonstrate the system, and describe limitations

3. Requirements Gathering

Stakeholder Analysis

Stakeholder	Needs
Patients	Find doctors, book and manage appointments, view queue information, and submit reviews after completed visits.
Doctors	Manage clinic schedules, consultation durations, and daily appointments.
Administrator	Manage clinics, review doctor documents, manage accounts, and review reports.
Clinics	Accurate clinic details and correct doctor associations.

User Stories & Use Cases

- **Patient:** As a patient, I want to search by specialty and location so I can find a suitable doctor.
- **Booking:** The patient logs in, selects a doctor and available slot, confirms the booking, and sees the appointment details.
- **Appointment management:** The patient views, reschedules, or cancels an appointment before its start time.
- **Doctor:** As a doctor, I want to manage my clinic schedule and view my daily appointment list.
- **Doctor approval:** The doctor submits registration documents; the administrator reviews them and approves, requests changes, or rejects the application.
- **Administrator:** The administrator manages clinic data, doctor accounts, and reported reviews.

Functional Requirements

1. The system shall allow patients to register and log in using email and password.
2. The system shall allow doctors to register and submit qualification documents.
3. The administrator shall approve, request changes to, or reject doctor applications.
4. Only approved doctor profiles shall appear to patients.
5. The administrator shall manage clinics and associate doctors with clinics.
6. Doctors shall manage their schedules and consultation durations per clinic.
7. Patients shall search doctors by specialty and location and view their profiles.
8. Patients shall book available appointments after logging in.
9. The system shall prevent conflicting bookings.
10. The system shall show appointment details, queue number, and estimated waiting time.
11. Patients shall view, reschedule, and cancel appointments before they start.
12. Patients shall review doctors after completed visits and report reviews; the administrator shall review reports.

Non-functional Requirements

- **Performance:** Key pages and actions should respond quickly; proposed test target under 2 seconds.
- **Security:** Protect account and patient information and apply role-based permissions.
- **Usability:** Search, booking, and appointment management should be clear and simple.
- **Reliability:** Validate availability and prevent conflicting confirmed bookings.
